

EDUCATION

Greenwich University, INFORMATION TECHNOLOGY

2019 - 2023

"Graduated in March 2024 with a Bachelor's degree in Information Technology from Greenwich University. Developed a solid foundation in IT principles and practical skills through various projects and coursework."

WORK EXPERIENCE

FPT Software, Software Developer

Jan 2024 - Jun 2024

As a Fresher C++ Automotive, I am responsible for testing a small project. This involves ensuring the stability and quality of the application through tasks such as creating and executing test cases and meticulously recording and reporting any errors discovered.

In addition, from January 2023 to June 2023 also at FPT Software. During the development of a Netflix-like movie viewing platform, I was involved in all stages of the life cycle, where I used Angular combined with Javascript to create that application, as it was a team project. So for my part, I take on the following roles:

- Login and account management: Perform login functions, manage user accounts, handle forgotten passwords, support updating personal information and manage the logout process.
- Live streaming and viewing content: This part, in my opinion, is the most difficult in terms of live streaming, pausing, fast forwarding, slow rewinding, etc.

CTY TNHH Truong Thanh, Software Development

Mar 2022 - Jul 2022

- At this time, I am working with the Kotlin language, which is related to software development on mobile applications.
- My project revolves around a sports news reading application.
- I utilized the spring framework combined with Kotlin to develop this application.
- The application comprises three main components: news, news videos, and settings management.
- Users can read news on 18 different topics including the homepage, current events, etc., updated directly from the news site <https://vnexpress.net/>.

SKILLS

Programming Languages: C++, JavaScript, Kotlin.

Framework: Angular, Express.js, React.js, Spring.

Technologies: Bootstrap, Firebase, HTML, CSS.

Development Tools: Eclipse, Visual Paradigm, Git, Visual Studio Code.

Database: MongoDB, MySQL.

Language: English (Level: B1)

INTERESTS

Stay updated with programming languages through blogs, Stack Overflow, and C++ references. Enhance English skills with movies and music.

Profile

Hello, I am Hoang Son, a new graduate looking to contribute and develop in a dynamic working environment that promotes career development. My expertise lies in languages like C++ and JavaScript, where I leverage my strong problem-solving skills and passion for technology. I aim to apply the knowledge and soft skills gained from both my studies and past experiences to contribute effectively, whether it is independent work or teamwork skills. I also always value learning and receiving opinions from experts and am committed to constantly improving my skills.
